

Coding Question 2:

Problem: You have been asked to write a function that will find the difference in days between two dates which are passed as parameters. Each of the dates in the code will be passed using a `Date()` object. The function should only return the whole number (int) number of days in the difference.

Example input:

```
numberOfDays(  
    new Date(2020,11,24),  
    new Date(2021, 0, 7)  
);
```

Example output: 14

```
var numberOfDays = function(startDate, endDate){  
    //Your code goes here  
}  
  
print(  
    //Print the answer to the problem, calling your function.  
);
```
