Coding Question 1:

Problem: You have been asked to write a function that will take a char array (or a string) as a parameter, and return the parameter in reverse.

Example input:

```
'B','A','C','K','W','A','R','D','S'
```

Example output:

```
'S','D','R','A','W','K','C','A','B'
```

```javascript
let GivenArray = ['B','A','C','K','W','A','R','D','S'];

let ReverseArray = function(array){

    // your code here.

}

print(
    //Print the answer to the problem
);
```
